

User Acceptance Testing (UAT) Form

VulnTriage — AI-Assisted Vulnerability Triage and Confirmation System

VulnTriage

Instructions. Thank you for helping evaluate VulnTriage. Please use the system (register & log in, upload a scanner report and run the triage, review the dashboard and a finding's details, run an authorised Auto Scan, and generate the PDF report), then rate each statement below by typing an **X** in the column that best matches your rating. There are no right or wrong answers.
Authorisation & scope. Any scanning is performed **only** against the provided, deliberately-vulnerable practice target (e.g. a local OWASP Juice Shop).

Rating (1 = Poor, 5 = Excellent)

Criteria	1	2	3	4	5
Meeting System Objectives					
• Multi-scanner vulnerability report processing					
• Machine learning-based vulnerability prioritisation					
• Confidence scoring and false-positive reduction					
• Proof-of-Concept validation of vulnerabilities					
• AI-assisted vulnerability analysis and recommendations					
• Professional PDF report generation					
User Interface					
• Dashboard is easy to understand					
• Navigation between modules is intuitive					
• Vulnerability information is clearly presented					
• Charts and visualisations are useful					
• Finding Details page is informative and easy to understand					
User Experience					
• Uploading scanner reports is straightforward					
• Running the vulnerability triage pipeline is simple					
• Auto Scan is easy to configure and execute					
• AI-assisted report generation is easy to use					
• PDF report generation is fast and straightforward					
System Functionality					
• Vulnerability findings are processed correctly					
• Duplicate findings are merged accurately					
• Confidence scores assist vulnerability prioritisation					
• Machine learning predictions are useful					
• AI-generated explanations are relevant and understandable					
• Generated reports are complete and downloadable					
System Reliability					
• No critical system errors were encountered					
• System functions operate consistently					
• Overall application performance is satisfactory					
• Application remained stable throughout testing
