

User Acceptance Testing (UAT) Form

VulnTriage — AI-Assisted Vulnerability Triage and Confirmation System

VulnTriage

Purpose. Thank you for helping evaluate VulnTriage. Please complete the six tasks in Section B using the system, then rate your experience in Sections C-F and add any comments in Section G. There are no right or wrong answers — your honest opinion is what matters.

Authorisation & scope. Any scanning during this test is performed **only** against the provided, deliberately-vulnerable practice target (e.g. a local OWASP Juice Shop). Do not point the system at any system you are not explicitly authorised to test.

SECTION A — Tester Profile

Name		Date	
Age		Role	
Background	☐ Cybersecurity student ☐ Junior security analyst ☐ IT / security staff ☐ Other:		
Security-tool experience	☐ None ☐ Some ☐ Experienced		

SECTION B — Tasks (tick when completed)

#	Task	Completed	Needed help?
1	Register an account and log in.	☐	Yes ☐ No ☐
2	Upload a scanner report and run the triage pipeline.	☐	Yes ☐ No ☐
3	From the dashboard, state how many findings are Confirmed vs the total.	☐	Yes ☐ No ☐
4	Open a Confirmed finding and explain, in your own words, why it was confirmed.	☐	Yes ☐ No ☐
5	Run an Auto Scan against the authorised target (acknowledging the authorisation control).	☐	Yes ☐ No ☐
6	Generate and download the PDF report (including the AI-assisted analysis).	☐	Yes ☐ No ☐

SECTION C — User Interface (rate 1-5)

Scale: 1 = Strongly disagree 2 = Disagree 3 = Neutral 4 = Agree 5 = Strongly agree

Criterion	1	2	3	4	5
I. The dashboard layout is clear and well-organised.	☐	☐	☐	☐	☐
II. The colour-coded severity indicators are easy to interpret.	☐	☐	☐	☐	☐
III. Navigation between Upload, Findings, and Reports is intuitive.	☐	☐	☐	☐	☐
IV. The charts and KPI cards present the triage summary clearly.	☐	☐	☐	☐	☐
V. The finding-detail view is readable and well-structured.	☐	☐	☐	☐	☐
VI. Buttons, forms, and controls are obvious and easy to use.	☐	☐	☐	☐	☐
VII. The overall look and feel is professional.	☐	☐	☐	☐	☐

SECTION D — General Functionality (Yes / No)

Criterion	Yes	No
-----------	-----	----

I. The system registers a new account and logs in without error.	☐	☐
II. A scanner report (ZAP / Nuclei / Nessus) can be uploaded and processed without error.	☐	☐
III. Findings are triaged and classified automatically after upload.	☐	☐
IV. The system responds appropriately to invalid input or an unsupported file.	☐	☐
V. The PDF report generates and downloads successfully.	☐	☐

SECTION E — Triage / Analyst Functionality (Yes / No)

Criterion	Yes	No
I. The confidence score and rationale help me judge whether a finding is real.	☐	☐
II. The Confirmed / Needs-Verification / Not-Confirmed classification is clear and useful.	☐	☐
III. The AI-assisted analysis (risk explanation and suggested fix) helps me understand the vulnerability.	☐	☐
IV. Deduplication correctly merges the same finding reported by multiple scanners.	☐	☐
V. The Auto Scan authorisation control makes the scope and consent clear.	☐	☐
VI. The generated report is suitable to hand to a stakeholder.	☐	☐
VII. Overall, the system reduces the manual effort of triaging scanner output.	☐	☐

SECTION F — Overall Acceptance

I accept this system as usable and fit for its purpose.	Yes ☐	No ☐
I would recommend this system to others who triage scanner output.	Yes ☐	No ☐

SECTION G — Comments & Suggestions
