VulnTriage — AI-Assisted Vulnerability Triage and Confirmation System

VulnTriage

Instructions. Thank you for helping evaluate VulnTriage. First, please use the system to (1) register & log in, (2) upload a scanner report and run the triage, (3) read the dashboard, (4) open a Confirmed finding and its rationale, (5) run an authorised Auto Scan, and (6) generate the PDF report. Then rate each statement below by placing a tick (✓) in the box that best matches your opinion. There are no right or wrong answers.

Authorisation & scope. Any scanning is performed **only** against the provided, deliberately-vulnerable practice target (e.g. a local OWASP Juice Shop).

Scale: 1 = Strongly disagree 2 = Disagree 3 = Neutral 4 = Agree 5 = Strongly agree

Please tick (✓) one box per row	1	2	3	4	5
A · USER INTERFACE & USABILITY					
1. The dashboard layout is clear and well-organised.					
2. The colour-coded severity indicators are easy to interpret.					
3. Navigation between Upload, Findings and Reports is intuitive.					
4. The charts and KPI cards present the triage summary clearly.					
5. The finding-detail view is readable and well-structured.					
6. Buttons, forms and controls are obvious and easy to use.					
7. The overall look and feel is professional.					
B · FUNCTIONALITY					
8. Registering an account and logging in worked without error.					
9. Uploading a scanner report (ZAP / Nuclei / Nessus) and running the triage worked without error.					
10. Findings were triaged and classified automatically after upload.					
11. The system handled invalid input / an unsupported file gracefully.					
12. The Auto Scan authorisation control made the scope and consent clear.					
13. The PDF report generated and downloaded successfully.					
C · TRIAGE VALUE (the system's core purpose)					
14. The confidence score and rationale helped me judge whether a finding is real.					
15. The Confirmed / Needs-Verification / Not-Confirmed classification is clear and useful.					
16. The AI-assisted analysis (risk explanation and suggested fix) helped me understand the vulnerability.					
17. Deduplication correctly merged the same finding reported by multiple scanners.					
18. The generated report is suitable to hand to a stakeholder.					
19. Overall, the system reduces the manual effort of triaging scanner output.					
D · OVERALL ACCEPTANCE					
20. I accept this system as usable and fit for its purpose.					
21. I would recommend this system to others who triage scanner output.
